

Metro Building at Eisenhower

2401 Mill Road • Alexandria, VA 22314

The new Mill Road Metro location integrates key functions with a renewed focus on the employee experience. For the first time, the office brings together many control center operations into an integrated space and supports a more collaborative command of the transit operations including bus, rail, passenger communications, power, security, video, elevators, and escalators. The building's design enables teams to coordinate together in real-time, working as a unified team to provide customers with clear, consistent messaging. The building is also occupied by geomatics, engineering, cybersecurity, and enterprise technology functions, which all play an integral role in securing the authority, maintaining its unique infrastructure and assets, and innovating new ways of employing technology to perform its mission.

PROJECT TEAM

Developer or Owner: Jair Lynch Real Estate Partners; Washington Metropolitan Area Transit Authority
