American Society of Civil Engineering

Construction Management
Association of America

James Stanley serves as Chief Operating Officer for Suffolk Construction Company. He is responsible for leading operations in Los Angeles for Suffolk, a national real estate enterprise building some of the most iconic developments across Los Angeles. As COO, Stanley's 20 years of expertise allows him to provide valuable direction in both the preconstruction and construction phases of a project – ensuring Suffolk delivers on all project goals. His industry experience also includes business development, operational efficiencies, jobsite safety and client satisfaction.

Jim is currently overseeing multiple notable projects, including 8920 Sunset Boulevard - a new 10-story mixed-used building on the iconic Sunset Strip; Evermont - a seven-story mixed-use complex with affordable housing and commercial anchor space; and Fig + Pico - a mixed-use development featuring two separate select service hotels and conference center space adjacent to the Los Angeles Convention Center, to name a few.

Stanley's leadership and operational skills are critical to providing effective guidance for the project team. He started his career as a project and field engineer and quickly moved up the ranks as a project manager, a project executive, and VP of operations. In 2020, he was named chief operations officer, running all the operations for Los Angeles. His client relationships speak for themselves and are at the core of his success.

Jim holds a Bachelor of Science degree in Civil Engineering from San Diego State University.
